

AIR FRAME X-20

Air Frame X-20 offers a simple and reliable solution for stacking and hanging projectors. With interlocking spigots, the frames can simply be stacked on top of each other and locked into position without the need for any additional accessories.

All Air Frames now feature three mounting plates for an Atom Grip to be attached, this allows the frame to be flown in either Landscape, Portrait or Floor-Projection orientations - with no need for any additional adapters.

The Air Frame offers an adjustment system to fine tune projection set ups. There are three controls to operate the adjustments; a left and right ratchet handle at the front of the frame allows the Roll and Pitch of the projector to be adjusted, whilst a single handle at the rear operates the Yaw adjustments.

Rigtec Air Frames also feature a quickly Removable Front Bar, this allows mirrored lenses like the ET-D75LE95 to be used without having to remove the projector from the frame.

The Air Frame X-20 is compatible with a range of projectors, including: [Panasonic PT-RZ21K](#), [PT-RZ12K](#), [PT-RQ13K](#), [PT-RQ22K](#), [PT-RS11K](#)

Specification

Part Number:	X-20	Max. Projector Weight:	70kg
Weight:	TBC	Max. Hanging Load:	100kg
Roll Adjustment:	± 3°	Max. Ground Stack:	3 Frames
Pitch Adjustment:	± 3,5°	Max. Suspended Stack:	2 Frames
Yaw Adjustment:	± 6°
