AIR FRAME X-25 (AF02-X25)

Packed with features and with incredible build quality, the Rigtec Air Frame X-25 is the essential projector accessory to unlock the full creative potential of your projector.

Get creative with your installations, the Air Frame can be suspended for Portrait, Landscape and Floor projection by simply attaching a Rigtec Atom Grip to one of the three mounting plates.

Eliminate any obstructions with the Removable Front Bar. When using ultra short throw lenses simply remove the front bar for imperfection free projection.

Fine tune your projection when visual precision is paramount. Air Frames feature 3 Axis adjustments, allowing the Pitch, Roll and Yaw to be adjusted no matter what orientation the projector is in.

Stacking Air Frames is fast, easy and secure. Interlock the stacking connectors and lock in place with the locking pins to create a solid stack of projectors ready to be suspended or ground stacked.
